- Vis2012: Gasteiger: [FinalVersion.mov](#)
– Several views of flow in cerebral aneurysm

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC
CH C/P/A 715, Taylor 2

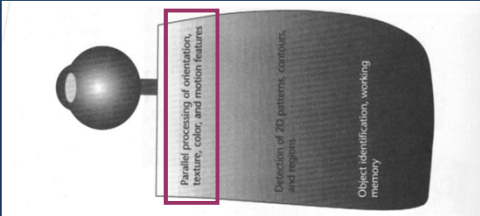

Patterns

- Investigation is often about finding patterns
 - That were previously unknown, or
 - That depart from the norm.
- Finding such patterns can lead to key insights
 - One of the most compelling reasons for visualization
- Today we look at
 - What does it take for us to see a group?
 - How is 2D space divided into distinct regions?
 - When are patterns recognized as similar?
 - When do different display elements appear related?

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC
CH C/P/A 715, Taylor 3

Object Perception Stages

- Stage 1: Parallel, fast extraction
 - Form, motion, texture, color, stereo depth
 - Contrast sensitivity, edge detection, as studied before

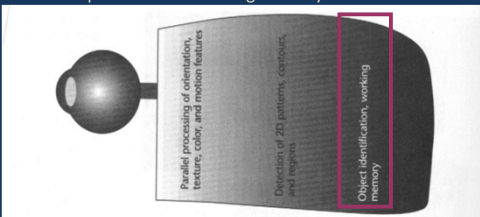

The diagram shows a funnel representing the stages of object perception. The funnel is divided into three sections. The top section is labeled 'Parallel processing of orientation, texture, color, and motion features' and is highlighted with a red box. The middle section is labeled 'Detection of 2D patterns, contours, and regions'. The bottom section is labeled 'Object identification, working memory'.

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 4

Object Perception Stages

- Stage 3: Object Identification
 - Slower, serial identification of objects within the scene
 - Comparisons with working memory

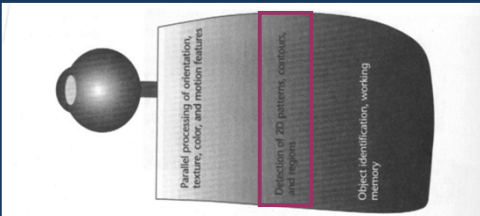

The diagram shows a funnel representing the stages of object perception. The funnel is divided into three sections. The top section is labeled 'Parallel processing of orientation, texture, color, and motion features'. The middle section is labeled 'Detection of 2D patterns, contours, and regions'. The bottom section is labeled 'Object identification, working memory' and is highlighted with a red box.

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 5

Object Perception Stages

- Stage 2: Pattern Perception
 - Contours and boundaries form perceptually distinct regions

The diagram shows a funnel representing the stages of object perception. The funnel is divided into three sections. The top section is labeled 'Parallel processing of orientation, texture, color, and motion features'. The middle section is labeled 'Detection of 2D patterns, contours, and regions' and is highlighted with a red box. The bottom section is labeled 'Object identification, working memory'.

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 6

Object Perception Stages

- There is feedback!
 - Linear model is a simplification
 - Later stage intentions affect earlier stage responses

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH CP/A 715, Taylor 7

Pattern Perception: Gestalt “Laws”

- Gestalt = “pattern”
 - School formed by Max Westheimer, Kurt Koffka, and Wolfgang Kohler
- Robust rules easily translate into design principles
 - * Proximity
 - * Symmetry
 - * Continuity (and Connectedness)
 - * Closure
 - Similarity
 - Relative Size
 - Figure and Ground

* = stronger cues

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH CP/A 715, Taylor 8

Proximity

- Things that are close are grouped together
 - One of the most powerful perceptual organizing principles
- We perceptually group regions of similar density
- Design Principle: Place related entities nearby

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH CP/A 715, Taylor 9

Symmetry (1/2)

- Bilateral symmetry stronger than parallelism

- Symmetric shapes seen as more likely

3/25/2014 Gestalt, Contours, Uncertainty

Visualization in the Sciences UNC
CH C/P/A 715, Taylor

10

Symmetry (2/2)

- Design principle: Make use of symmetry to enable user to extract similarity

3/25/2014 Gestalt, Contours, Uncertainty

Visualization in the Sciences UNC
CH C/P/A 715, Taylor

11

Continuity

- Good continuity of elements

- Easier with smooth curves than abrupt changes

- Design Principle: Connector and crossing linear elements should be smooth, without sharp bends

3/25/2014 Gestalt, Contours, Uncertainty

Visualization in the Sciences UNC
CH C/P/A 715, Taylor

12

Connectedness

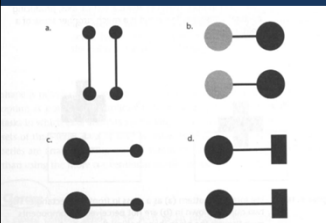

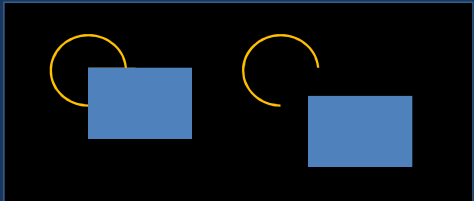

Figure 6.8 Connectedness is a powerful grouping principle that is stronger than (a) proximity, (b) color, (c) size, and (d) shape.

- Palmer and Rock (1994) argue that this is more fundamental than continuity
- Design principle: Positive and negative statement:
 - Connecting two objects can group them even when they are not otherwise similar.
 - Unrelated objects should not be connected, or they will appear to be grouped no matter what.

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 13

Closure (1/2)

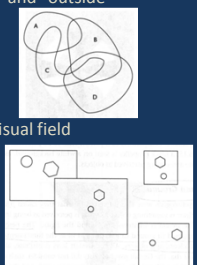

- A closed contour is seen as an object
- Perceptual system will close gaps in contours

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 14

Closure (2/2)

- Contour separates world into "inside" and "outside"
 - Stronger than proximity
 - Venn diagrams from set theory
 - Closure and continuity both help
- Closed rectangles strongly segment visual field
 - Provide frames of reference
- Design Principle:
 - Partial obscuration may be okay
 - Especially for symmetric objects

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 15

Similarity

- Color or shape similarity groups by row
- Separable dimensions enable alternate perception
- Design Principle: Items to be grouped should share similar characteristics

Integral dimensions form stronger pattern

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH C/P/A 715, Taylor 16

Relative Size

- The smaller components of a pattern tend to be perceived as the object
 - Black propeller on white background
- Horizontal and vertical tend to be seen as objects
- Plays into figure/ground principle
- Design principle
 - Make dots the object rather than “cheese grater”

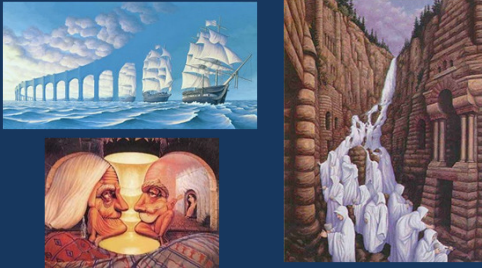

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH C/P/A 715, Taylor 17

Figure and Ground

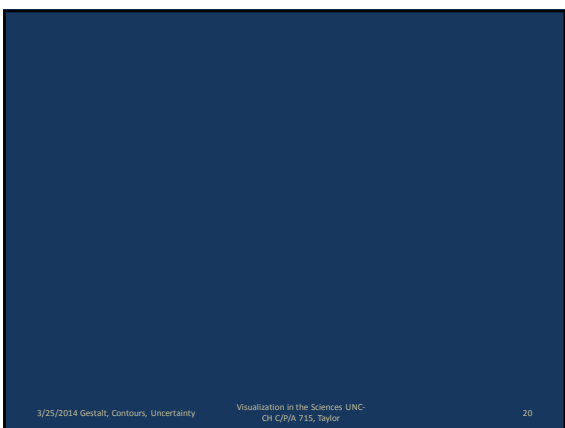

- The fundamental perceptual act in object identification according to Gestalt school
- What is foreground, what is background?
- All other principles help determine this

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH C/P/A 715, Taylor 18

Figure/Ground Illusions from SPAM

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC
CH C/P/A 715, Taylor 19

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC
CH C/P/A 715, Taylor 20

Contours

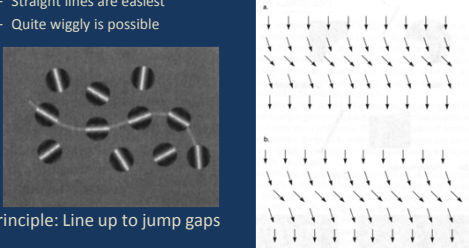

- Perceived continuous boundary between regions
 - Line (sharp change on both sides in intensity)
 - Boundary between regions of two colors
 - Stereoscopic depth
 - Patterns of motion
 - Texture
- Illusory (continuity & closure):

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC
CH C/P/A 715, Taylor 21

When do contours jump gaps?

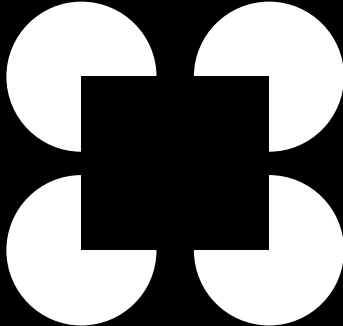

- When a smooth curve can be drawn over gaps
 - Straight lines are easiest
 - Quite wiggly is possible

- Principle: Line up to jump gaps

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH C/P/A 715, Taylor 22

Edge Completion

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH C/P/A 715, Taylor

Edge Completion

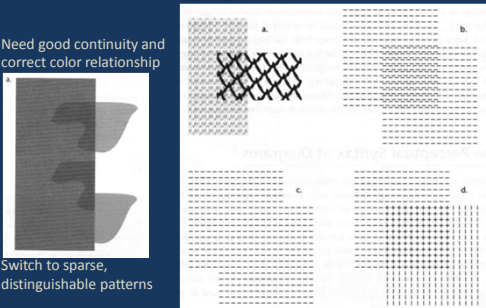

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH C/P/A 715, Taylor

Transparency (1/2)

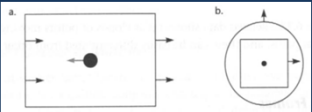

- Attempting to present multiple data layers
- Many perceptual pitfalls
 - “WARNING, WARNING, DANGER Will Robinson!”
 - Different layers interfere with each other to some extent
 - Sometimes layers will fuse perceptually into one
 - Patterns similar in color, frequency, motion, etc. interfere more
- Design principle:
 - Make layers differ in at least one significant dimension
 - Try before you buy

Transparency (2/2)

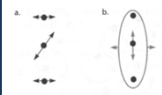

- Need good continuity and correct color relationship
- 
- Switch to sparse, distinguishable patterns

Frames in Motion

- Rectangular frame forms strong context

- Groups of dots moving together form frame

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 31

Motion Design Principles

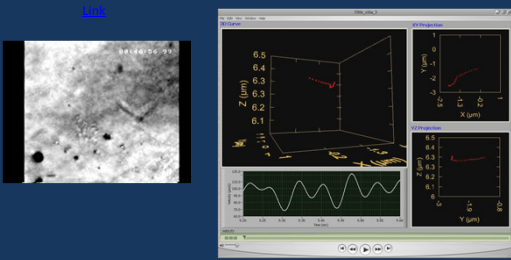

- Use motion as strong cue for grouping
- Add frame around group of related particles
- Speed around a few cm per second
 - Speed up things that are much slower than this (Show [video of beads](#), use arrows and hide left then play)
 - Slow down things that are much faster (See next slide)

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 32

Slow Down Fast Objects

[Play with Quicktime](#)

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 33

Other Motion Information

- Motion can express causality
 - Launching
 - Delayed Launching
 - Triggering
- Motion of dots on human limbs is immediately recognizable as such
- Motion patterns can express emotion or behavior
 - Happy triangle, excited square, sad circle

Comp/Phys/Mtsc 715

Visualizing Uncertainty

Sources of Uncertainty

- Wittenbrink et al., TVCG 2(3), 1996

Fig. 1. This augmented visualization pipeline shows measurement uncertainty, derived uncertainty, and visualization uncertainty. Our glyphs attempt to multiplex these uncertainties with the data sources from the visualization pipeline.

The Taxonomy of Uncertainty

- Evan Watkins, masters thesis, Air Force Institute of Technology, 2000

Figure 16. The Taxonomy of Uncertainty

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH C/P/A 715, Taylor 37

Error Bars vs Ambiguity

- Olston and Mackinlay, InfoVis 2002
- There is a difference between statistical uncertainty and bounded uncertainty
 - Statistical: has an expected value and distribution extends to infinity
 - Bounded: no preferred value, just a range of possible values
- Use ambiguity for bounded uncertainty

Figure 1: Error bars and ambiguity applied to some common chart types.

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH C/P/A 715, Taylor 38

Three Views on Uncertainty Visualization

- View 1
 - Uncertainty is just another data set
 - Apply techniques for multivariate visualization
 - Show relationship between data and uncertainty
- View 2
 - Uncertain data may take on a range of values
 - Show possible range of data
- View 3
 - Uncertain data should intentionally be obscured
 - Actively prevent users from making judgments about uncertain data

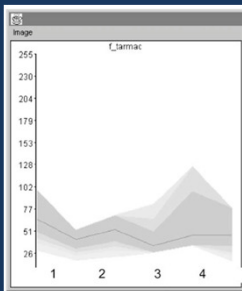

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH C/P/A 715, Taylor 39

Two Classes of Uncertainty Visualization Techniques

- Extrinsic
 - Additional visualization techniques to show uncertainty
 - Glyphs, annotations, volume rendering, animation
- Intrinsic
 - Vary visualization technique properties to show uncertainty
 - Transparency, Color maps, texture properties, etc.

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 40

Fuzzy Spectral Signatures

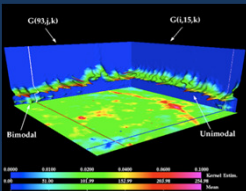

- Bastin et al., Computers & Geosciences 28 (2002), pp. 337-350
- Showing fuzzy classifications of multi-spectral imagery
- Graph show thick lines of probability that a land cover type produces specific reflectivity in each band
- Mean reflectivity shown as dark line

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 41

Showing Uncertainty with Standard 2D Scalar Techniques

- Dungan et al., IGRSS 2002
- Use standard 2D scalar techniques for showing statistical information in remote sensing applications
- Shows uncertainty from different estimates of forest cover

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor

Saturation as an Indicator of Uncertainty

- Tomislav Hengl, GeoComputation, 2003
- Map data to color map, uncertainty to saturation

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 7.15, Taylor 43

RGB Color Mapping

- Cliburn et al., Computers & Graphics 26, 2002, pp. 931-949
- Temperature, soil, and precipitation encoded as intensities of red, green, and blue, respectively according to how much each contributes to uncertainty in water balance model

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 7.15, Taylor 44

Isosurface Uncertainty

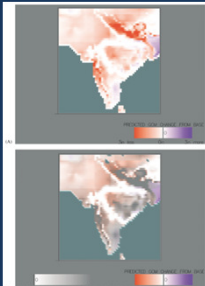

- Kindlmann et al., IEEE Vis 2003
- Color map shows uncertainty

Figure 11: CT isosurfaces at values 1055, 1095, 1175, 1255, 1335, and 1405, colormapped by flowline curvature. Circle indicates site of high surface curvature and low flowline curvature.

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 7.15, Taylor 45

Transparency to Hide Uncertain Data

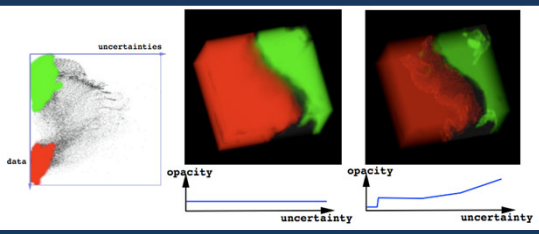

- Cliburn et al., Computers & Graphics 26, 2002, pp. 931-949
- Water balance model uncertainty
- Goals: don't want users to make decisions affecting locations where uncertainty is high
- Make uncertain regions transparent

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 46

Volume Rendering of Uncertainty Data

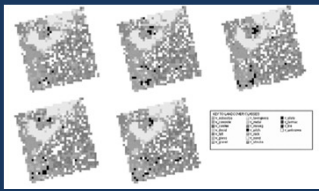

- Djurcilov et al., Data Visualization 2001

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 47

Animation Showing Uncertainty in Remotely Sensed Imagery

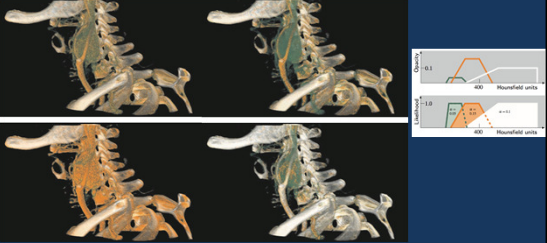

- Bastin et al., Computers & Geosciences 28 (2002), pp. 337-350
- Sources of uncertainty
 - Spectral confusion of land cover types
 - Spatial mis-registration
 - Topographic and atmospheric effects
 - Sensor biases
- Pixels randomly change between land cover types over time according to probability distribution

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 48

Probabilistic Animation in Volume Rendering

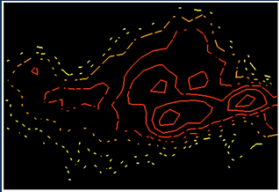

- Lundstrom et al., TVCG 13(6)

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC
CH C/P/A 715, Taylor 49

Broken Contour Lines

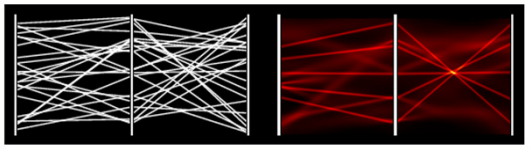

- Alex Pang, "Visualizing Uncertainty in Geospatial Data", prepared for Computer Science and Telecommunications Board, 2001
- Broken-ness of lines indicates uncertainty in location of contours

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC
CH C/P/A 715, Taylor 50

Kernel-Density Uncertainty

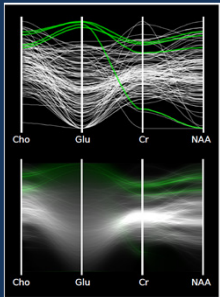

- Feng 2010
- Blurring lines by uncertainty removes false negative to indicate correlations

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC
CH C/P/A 715, Taylor 51

Kernel-Density Uncertainty (2)

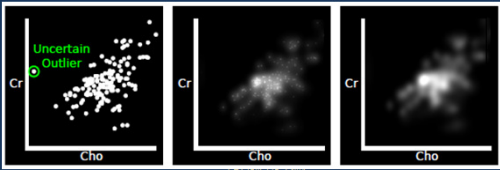

- Feng 2010
- Blurring lines by uncertainty removes false positive to indicate no useful data in cluster

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH C/P/A 715, Taylor 52

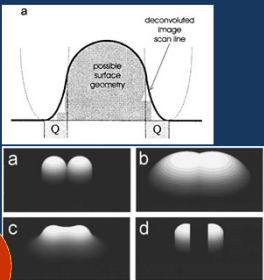

Kernel-Density Uncertainty (3)

- Feng 2010
- Blurring points by uncertainty removes false positive to indicate no outlier
- Adding center-highlighting shows samples

Uncertain Regions in AFM Surface Reconstructions

- Leung et al., J. Vac. Sci. Tech. B, 15(2), 1997
- Accounting for uncertain surface reconstruction in atomic force microscopy
- Shows uncertainty by making parts of reconstructed surface black (zero height)

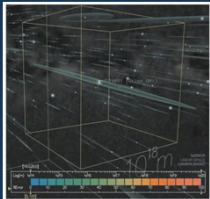

Uncertainty displayed with same channel as data

3/25/2014 Gestalt, Contour Uncertainty Visualization in the Sciences UNC-CH C/P/A 715, Taylor 54

Displaying Uncertainty in Astrophysical Data

- H. Li et al., IEEE Vis 2007

Where is Betelgeuse?

Where will a star be in 50,000 years?

Fig. 5. Left: An example model showing trajectory uncertainty of a Hurricane. Right: The trajectory uncertainty of a star in 50,000 years; note: the color reveals the percentage error and the trajectory data of this star are 1) Radial component: $(2.87 \pm 0.41) \times 10^{11} \text{ m/yr}$, 2) RA: $(-4.34 \pm 0.57) \times 10^{-8} \text{ rad/yr}$, and 3) Dec: $(-1.23 \pm 0.40) \times 10^{-8} \text{ rad/yr}$.

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC, CH C/P/A 715, Taylor 55

Approaches to Visualizing Vector Uncertainty

- Wittenbrink et al., TVCG 2(3), 1996
- Table of glyphs potentially used for showing uncertainty
- Attempt to convey magnitude and angular uncertainty

	$d\theta$	dm
	X	X
	X	
	X	X
		X
	X	X
	X	X

Fig. 5. Variety of glyphs considered for magnitude and angular uncertainty.

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC, CH C/P/A 715, Taylor 56

Wittenbrink Uncertainty Glyphs

- Wittenbrink et al., TVCG 2(3), 1996

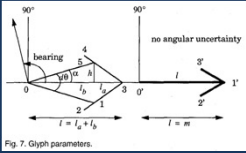

Fig. 7. Glyph parameters.

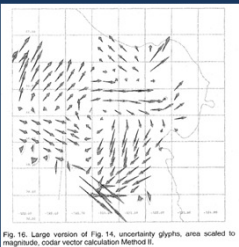

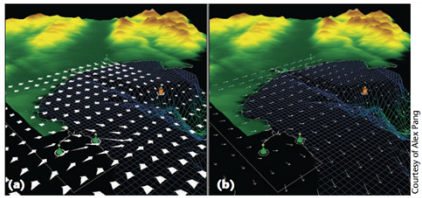

Fig. 16. Large version of Fig. 14, uncertainty glyphs, area scaled to magnitude, color vector calculation Method II.

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC, CH C/P/A 715, Taylor 57

Display of Uncertainty with Glyphs

- Johnson and Sanderson, CG&A Sept/Oct 2003
- Images from Alex Pang

2 Visualization of wind velocity (a) with and (b) without uncertainty using direction uncertainty glyphs and regular arrow glyphs, respectively.

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 58

2004 Sanderson, Johnson, Kirby

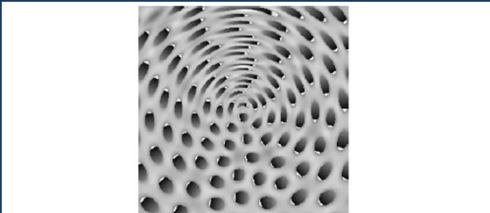

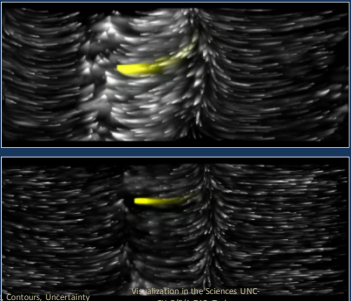

Figure 7: Reaction-Diffusion visualization of orientation uncertainty. The orientation uncertainty is a function of the angular position.

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 59

Error in Vector Fields

- Botchen et al., IEEE Vis 2005

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 60

Error in Vector Fields

- Botchen et al., IEEE Vis 2005
- Note: draws attention to uncertain regions!

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 61

Positional Uncertainty in Molecules

- Rheingans and Joshi, Data Visualization 1999
- Conveying uncertainty in atom positions in molecules

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 62

Metastable Molecular Visualization

- Schmidt-Ehrenberg, IEEE Vis 2002
- What is the space of possible molecular conformations?
 - Shows confirmation density
 - Similar to notion of electron density

Figure 5. Metastable conformations of the molecule Indirubin. The image in the middle shows three conformations via representative geometries embedded in a direct volume rendering of their combined conformational densities. The left and right image show two of the conformations from different perspectives visualized with representative geometries and contours of their conformational densities. Alignment was done using the atoms of the linear double ring.

Left and right: 2 conformations
Middle: volume rendering of density
Bottom two rings used for alignment

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 63

Vibrating Surfaces (3D)

- R. Brown, "Animated visual vibrations as an uncertainty visualization technique", 2004

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 64

Vibrating Colors

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 65

Line Glyphs for Showing Uncertainty (1/2)

- Cliburn et al., Computers & Graphics 26, 2002, pp. 931-949
- Separate lines for each variable drawn at each sample point with different color
- Size of line indicates magnitude of uncertainty

3/25/2014 Gestalt, Contours, Uncertainty **Isoluminant lines with background, cluttered** 66

Line Glyphs for Showing Uncertainty (2/2)

- Dungan et al., IGRSS 2002
- Four statistics summarizing variance in elevation data

3/25/ Visualization in the Sciences UNC-CH C/P/A 715, Taylor 67

Box Glyphs for Showing Uncertainty

- Schmidt et al., Visual Analytics, Sept./Oct. 2004

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH C/P/A 715, Taylor 68

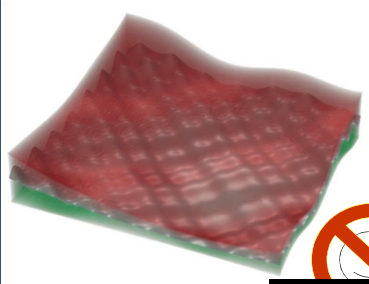

Point-based Surfaces

- Grigoryan and Rheingans, TVCG 10(5), 2004
- Render geometry as points
- Uncertainty conveyed by random displacement along normal
 - Higher uncertainty = higher range of displacements

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH C/P/A 715, Taylor 69

Isosurface Uncertainty

- Johnson and Sanderson, CG&A Sept/Oct 2003

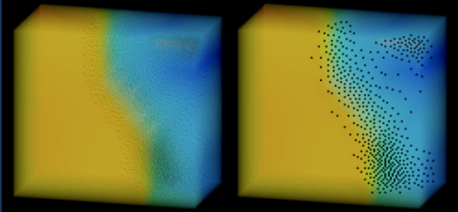

Uniform transparency hides all surface shapes

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH C/P/A 715, Taylor

Adding Texture to Express Uncertainty

- Djurcilov et al., Data Visualization 2001
- Speckles show areas of uncertainty

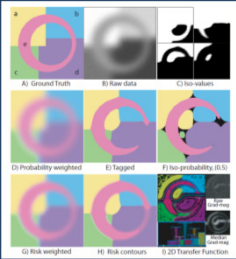

71

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH C/P/A 715, Taylor

Risk-based Classification (2D)

- Kniss et al., IEEE Vis 2005
- Delays material classification until rendering
- Importance is inversely proportional to penalty for misclassifying materials in volume

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC-CH C/P/A 715, Taylor

Risk-based Classification in Volume Rendering

Figure 5: Effect of varying the importance term for white matter in a classified brain dataset visualization.

- Lodha et al., UFLOW, 1996

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 83

Sonification

- LISTEN library by Lodha et al., IEEE Vis 1996
- Use sound to express uncertainty
 - Use another perceptual channel besides visual
 - Uncertainty of data at probe mapped to pitch which can “show” more values than color map
 - Uses different timbres to display multiple variables
- Auditory perception and processing not understood well
- Good mappings to sound are unknown

3/25/2014 Gestalt, Contours, Uncertainty Visualization in the Sciences UNC CH C/P/A 715, Taylor 84
